New York, NY 10016

Dear Harvey,

As you are well aware the results have been truly amazing on our 1998 Ford Windstar vans that we installed the FuelMiser XL on. We have experienced a significant increase in MPG ranging from 12% to in some cases as high as 23% depending on the driving and weather conditions. Additionally there is a noticeable increase in performance and power. While I have not performed any emissions tracking, I cant help but believe, based on my fleet experience that we have done very well in that area also.

In addition to the obvious advantage of saving significant dollars on fuel, we are also experiencing other very favorable increased productivity, since the vehicles are able to travel farther between fueling. Obviously this relates to less time at gas stations and more time for the driver to be performing his job serving our customers. I have to honestly say that this product seems to be the first legitimate fuel efficiency product that so far passed all of our rigorous testing. I also researched this product with the manufacturer to insure that there is not any safety or warranty related issues in utilization of the FuelMiser on their product, and got Ford concurrence on this.

Therefore, because of the positive factual results to date, I have taken the FuelMiser product to the next level of installation in my fleet. This means that Xerox will be moving towards a phased installation across our entire fleet. As a result, I am looking forward to the potential huge productivity initiative of fuel savings in the Xerox fleet.

While this is not an outright Xerox Corporation endorsement, the facts are the facts, and I look forward to a long relationship with you and your fine products.

Sincerely,

Robert W. Brown
Manager, Vehicle Fleet
Business and Operations
